

Franchise Mobile x NBA 2K Guided Product Demo

A ten-minute walkthrough designed to prove the mobile league operating layer while clearly separating the working prototype from the proposed NBA 2K integration.

Franchise Mobile keeps the league connected. NBA 2K remains where basketball is played.

Prepared for a private product and technical evaluation with Take-Two Interactive, 2K, and Visual Concepts.

Non-confidential presentation layer. No source code, credentials, private formulas, raw datasets, or repository access included.

Before the meeting

Environment check

- Confirm the app is using the isolated demo environment, never the production Firebase project.
- Use the founder account only for the owner-led presentation. Outside recipients receive viewer access only.
- Open the prepared pitch league and verify the roster, schedule, showcase box scores, league stats, Command Center, Trade Center, and League Chat.
- Close Firebase Console, terminals, source code, password managers, debug overlays, and unrelated browser tabs.
- Keep the strategic deck and a backup visual reel ready in case the live demo becomes unavailable.

Language discipline

- Say 'working prototype' for features visible in the app.
- Say 'proposed integration' for synchronization with NBA 2K services, console, or PC.
- Never imply that 2K has approved the concept or that a public integration API exists.
- Do not explain simulation formulas, rating methodology, credentials, or implementation internals.

Demo objective: earn a focused product and technical evaluation, not close every commercial question in the first meeting.

Ten-minute walkthrough

0:00–0:45 | Open with the thesis

Screen: Show the league home or Command Center.

- Say: 'Franchise Mobile keeps the same MyNBA or MyGM league active while users are away from console or PC.'
- Clarify that NBA 2K remains the authoritative place for playable basketball and licensed content.
- Set the problem: coordination currently spills into disconnected chats, spreadsheets, and manual commissioner work.

0:45–1:45 | Enter the connected league

Screen: Open the prepared 30-team pitch league.

- Point out human ownership and CPU-controlled vacancies.
- Explain that vacant franchises continue operating until a human GM takes over.
- Show that the schedule and roster survive an ownership transfer.

1:45–3:00 | Show the Command Center

Screen: Open GM Lounge and the league operations modules.

- Show league chat, voting, rules, moderation, game resets, news, stats, Player Wire, and Coaching Room.
- Emphasize that this is the shared operating layer for the league, not a passive companion feed.
- Mention reactions, GIFs, photos, block, and report controls without dwelling on every button.

Ten-minute walkthrough (continued)

3:00–4:15 | Show player and roster intelligence

Screen: Open a roster and one polished player card.

- Explain tier, archetype, skill grades, potential, and development outlook as separate concepts.
- Show how a GM can evaluate fit and value without launching the full game.
- Avoid discussing private rating formulas or raw source datasets.

4:15–5:30 | Show trade operations

Screen: Open Trade Center, block feed, or a prepared trade room.

- Show shopping, targets, protected players, team-grouped block listings, and structured negotiation.
- Explain that CPU teams consider direction, roster needs, and value when a human GM is absent.
- Do not initiate an untested server-backed action during the pitch.

5:30–6:45 | Show schedule and preparation

Screen: Open Calendar and a scheduled matchup.

- Show the league schedule, matchup request flow, and pregame coaching preparation.
- Explain the proposed handoff: prepare on mobile, play on NBA 2K, synchronize authoritative results back.
- Keep the current prototype flow distinct from the future service integration.

Ten-minute walkthrough (continued)

6:45–8:00 | Show returned game evidence

Screen: Open a seeded completed game and league stats.

- Show final score, quarter scoring, top performers, full box score, standings impact, and league-wide player statistics.
- State that the pitch demo uses seeded/sample results so the walkthrough remains reliable without paid demo services.
- Connect the result to the next social and front-office decisions.

8:00–9:10 | Explain the continuous loop

Screen: Return to Command Center.

- Summarize: prepare, play, sync, react, repeat.
- Explain how alerts, negotiations, league news, CPU continuity, and offseason decisions create reasons to return.
- Briefly introduce MyCAREER community as a later roadmap: squads, teammate discovery, scheduling, events, and persistent identity.

9:10–10:00 | Close with the ask

Screen: Return to the final deck slide.

- Ask for a product and technical evaluation with NBA 2K product leadership, Visual Concepts, and 2K online/mobile services.
- Propose a narrow sandbox pilot before deeper commercial or source-code diligence.
- Confirm the next owner, requested materials, and a specific follow-up date.

Fallback routes

Situation	Response
Live app unavailable	Use the strategic deck and backup visual reel. Keep the meeting focused on the product loop and working proof.
A page loads slowly	Move to the next approved screen. Do not open developer tools or Firebase during the meeting.
Seeded game is missing	Use the approved screenshot in the deck. Record the issue for a post-meeting follow-up.
Viewer cannot enter	Present from the founder account through screen share. Do not share founder credentials.
Technical question exceeds scope	Say the exact service contract must be defined with 2K and Visual Concepts; offer a written follow-up.

Never troubleshoot by exposing credentials, source code, Firebase identifiers, private formulas, or repository access.
